

[illegible]

Figure 1 is a scatter plot showing the N-S Direction [AU] versus the Sun-Earth Direction [AU]. The plot displays the positions of various interstellar objects (ISOs) relative to the Sun and Earth. The Sun is at the origin (0,0). The Earth is at approximately (1.0, 0.0). The plot includes concentric dashed circles representing distances from the Sun (0.25, 0.50, 0.75 AU) and a solid arc representing the Earth's orbit (1.0 AU). ISOs are represented by circles of varying sizes and colors (yellow, red, green). Many ISOs are labeled with their names and discovery dates in parentheses. The plot shows that most ISOs are located between 0.25 and 0.75 AU from the Sun and are moving away from the Sun towards the Earth.
